# CloudCME Mobile App

Download

The CloudCME mobile app is available for iOS and Android devices and can be installed by searching for "CloudCME" in the Apple or Google stores, or by clicking the direct links below:
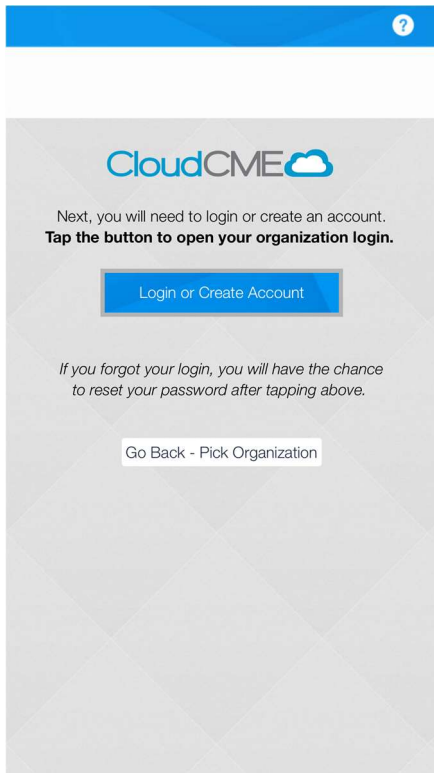

Apple iOS: https://itunes.apple.com/us/app/cloudcme/id624053130?mt=8
Google Android: https://play.google.com/store/apps/details?id=com.multiweb.checkin

Using the CloudCME App

When you first launch the app you will be asked to provide a few pieces of basic information. First, you will need your organization code, which is the same as the name used in the CloudCME portal web address. For WMed, the Organization Code is "wmed".

You will also need your CloudCME or institutional account login name and password. After you have verified your organization, click the "Login or Create Account" button to open the login panel.

Note that once you have logged in successfully, you do not need to logout unless you specifically need to login on the same device with a different account. The app will save your login information when you quit and restart the app.

Main Menu

After you login, the main menu will display the options that your organization has available. Tap any option to view the content and tap the Home icon to get back to the main menu.
